

Improved CVH Hatcher Fan Assembly

Increased airflow, more efficient water cooling, and no chick down build-up

- New venturi fan frame increases airflow through hatcher baskets.
- Improved airflow using ¼ HP motors results in more efficient air movement, keeping chicks comfortable.
- New braided cooling coils increase surface area and cooling capacity with no increased water usage.
- Fan position eliminates chick down build-up on copper coils, adding greater cooling efficiency.
- Better airflow and water cooling with less energy and water consumption, result in more comfortable chicks – the right combination for a better hatch and chick quality.
